                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa21 multigene family. Such genes from cassava, maize and tomato are also described. The genes and proteins can be used for enhancing resistance to Xanthomonas in a plant, preferably in rice or tomato.

Claim 21; Pages 40-46; 123pp; English.

CC The sequence is that encoding SERK, a putative receptor kinase. CC It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide comprising: (a) transforming plant material with a nucleotide cell membrane renders the cell embryogenic; (b) regenerating cell membrane renders the cell embryogenic; (b) regenerating the transformed material into plants or carpel-containing cell embryo sac. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant cell breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the compositic plant. Apomixis provides for true-breeding, seed propagated hybrids and could shorten and simplify the breeding programs to that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated. Apomixis allows plant breeders to develop cultivars with cell specific stable traits for such characteristics as height, seed and forage quality and maturity.

DNA encoding plant morphogenesis regulatory protein - useful to yield plants with short stems or altered inflorescence Claim 1; Pages 6-10; 17pp; Japanese.
The present sequence encodes an Arabidopsis thaliana plant morphogenesis regulatory protein (MRP), which can be used to yield a plant with, e.g. short stems or altered inflorescence. The MRP acts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.

                                                                                                                                                                                                                                       Production of apomictic seeds - useful in plant breeding
Claim 26; Pages 64-67; 123pp; English.

The sequence is that encoding SERK, a putative receptor kinase.

It may be used as part of a method of producing apomictic seeds
comprising: (a) transforming plant material with a nucleotide
sequence encoding a protein which in active form in a cell or
cell membrane renders the cell embryogenic; (b) regenerating
the transformed material into plants or carpel-containing
plant parts; and (c) expressing the sequence in the vicinity
of the embryo sac. The apomictic seeds and embryos thus produced
can be developed into plant progeny. This is useful in plant
the case that sexual plant provement and cultivar development in
the case that sexual plants are available as crosses with the
apomictic plant. Apomixis provides for true-breeding, seed
propagated hybrids and could shorten and simplify the breeding
process so that selfing and could shorten and simplify the breeding
process so that selfing and could shorten and simplify the breeding
stabilise a desirable gene combination could be eliminated.
Apomixis allows plant breeders to develop cultivars with
seed and forage quality and maturity.

New RRK polynucleotides and nucleic acid constructs - used for generating transgenic plants resistant to Xanthomonas Claim 1; Page 48-50; 67pp; English.

This invention describes a method for conferring disease resistance i plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa21 multigene family. Such genes from cassava, maize and tomato are also described. The genes and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wang G;

Claim 9; Page 85-87; 131pp; English.

T06307 is a tomato pathogen resistance gene Cf-2.2 partial cDNA clone. In a new method this gene is expressed highly in genetic constructs which may be used to impart a broad range of pathogen resistance, by induction of variegation, to transgenic plants (or parts or propagules of plants) containing such constructs. Cf-2.2 imparts resistance to the disease caused by the leaf mould fungal pathogen Cladosporium fulvum. C.fulvum contains avirulence (Avr) genes that confer recognition by plants containing Cf-genes, leading to the activation of host defence mechanisms to attack the disease.

Claim 9; Page 80-83; 131pp; English.

706306 is the tomato pathogen resistance gene Cf-2.1. In a new method this gene is expressed highly in genetic constructs which may be used to impart a broad range of pathogen resistance, by induction of variegation, to transgenic plants (or parts or propagules of plants) containing such constructs. Cf-2.1 imparts resistance to the disease caused by the leaf mould fungal pathogen Cladosporium fulrum. C.fulrum contains avirulence (Avr) genes that confer recognition by plants containing Cf-genes, leading to the activation of host defence mechanisms to attack the disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note="Vector: lambda Zip-Lox; Site_1: Sal; Site_2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated eticlated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and sliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dr primed cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /db_xref="taxon:3702"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note-Tyector: lambda Zip-Lox; Site_1: Sal; Site_2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etholated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dT primed cDNA.

/note="Vector: lambda Zip-Lox; Site_1: Sal; Site_2: Not;
/note="Vector: lambda Zip-Lox equal
quantitles of 4 pools of mRNA. The mRNA sources were 1) /
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark- rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
saliques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed cDNA."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dT primed cDNA. 78 g 99 t 16 others
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              35.0%;

The mRNA sources were 1) and germinated eticlated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and sliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using ollgo dl primed cDNA. "

Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour 119ht
cycle, half on 16 hr light, 8 hour dark-rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
siliques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed cDNA.

A., Director, Keck Center for Comparative and Functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AW350720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note-"Vector: pBluescript II XR; Site_1: EcoRI; Site_2: /note-"Vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhoI; Library Gm-r1021 is a sequence-driven, reracked set of the original library Gm-c1004 which was prepared from root cDNA, The mRNA was isolated from entire roots of 8 day old 'Williams' seedlings which were propagated on paper towels with distilled water. Stratagene's CDNA Synthesis Kit (catalog #200401) was used to synthesize the cDNA. The Gm-c1004 library was constructed by Dr. Paul Keim & Virginia H. Coryell, Department of Biology, Box5640, Northern Arizona University, Flagstaff, Az 86011, email: paul keimenau.edu, virginia.coryell@nau.edu. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Computational Biology
